

Mobile Frame options

All metal skids can be galvanised at extra cost.

WHEEL OPTIONS AVAILABLE ON METAL VERSION

Wooden pressure treated skids line the base of the building and can be towed from both sides using 5tonne strain nylon rope. Very inexpensive way of being able to move your unit. On units larger than 16ft a galvanised joining plate is used (Figure to left), this allows for skids to be up to 25ft.

Not recommended for large buildings (unless moving small distances) or for regular towing

Very strong and durable 60mm box section base which building is anchored down onto. Will withstand most terrains and can be pulled with 4x4 or tractors. Chains and D clips are optional for purchase. Highly recommended for regular towing and/or builds from 16ft upwards.

Galvanised versions available, which will last forever.

HEAVY DUTY 100mm box sectional frame.

For regular towing, bad terrain or large buildings.

Advisable to be towed by tractor especially on 24ft buildings/stables.

Screw thread on D link easily detached in seconds.

After chain taken off
